Re: Land Development Project Engineer

Dear Hiring Manager,

Your Charlotte land development group is looking for a Project Engineer who can run multifamily and commercial sites through City of Charlotte and Mecklenburg County review. I have done that work for eight years, and I have held a North Carolina PE license since 2023.

At Catawba Land Design I manage seven to nine active sites at a time. The largest recent one was a 42-acre, 310-unit apartment community with two wet ponds. I laid out the grading and storm system in Civil 3D, modeled the detention in HydroCAD against the Post-Construction Stormwater Ordinance, and the plans cleared city review in two cycles. Since licensure I have sealed 14 plan sets with construction values between $1.2 million and $9.8 million, and I stay on through construction to answer RFIs and review shop drawings.

My first four years were at a smaller firm in Gastonia, where I worked on NCDOT-funded sidewalk and turn-lane projects and wrote erosion control plans for 16 sites. That mix of roadway and site work is useful on projects where the driveway permit and the offsite improvements hold up the schedule. I now supervise two EITs and a CAD technician and review their sheets before every submittal.

I would welcome a conversation about the projects your group has coming up and where I could take work off your senior engineers' plates.

Sincerely,

Anjali Mehta
