Stripe
San Francisco, CA

Re: Senior Software Engineer

Dear Hiring Manager,

I've spent the last eight years making backend systems faster and more reliable, so a Senior Software Engineer role at Stripe — where milliseconds and uptime are the product — is exactly where I want to do my best work.

At my current role I cut p99 API latency 42% by redesigning the request-routing layer, then led a migration of billing services to async workers that doubled throughput to 18k requests per second. Earlier, I built the dispatch service powering over a million daily deliveries and trimmed assignment time 28%. I work in Go and Python, own systems from API design through multi-region failover, and care as much about the on-call experience as the launch.

Stripe's reputation for engineering rigor and developer-loved APIs is what draws me in — I'd be glad to bring that same bar to your payments path. I'd welcome the chance to discuss how I can help.

Sincerely,

Alex Morgan
